LARGE SIZE

WIDTH: 1280 px

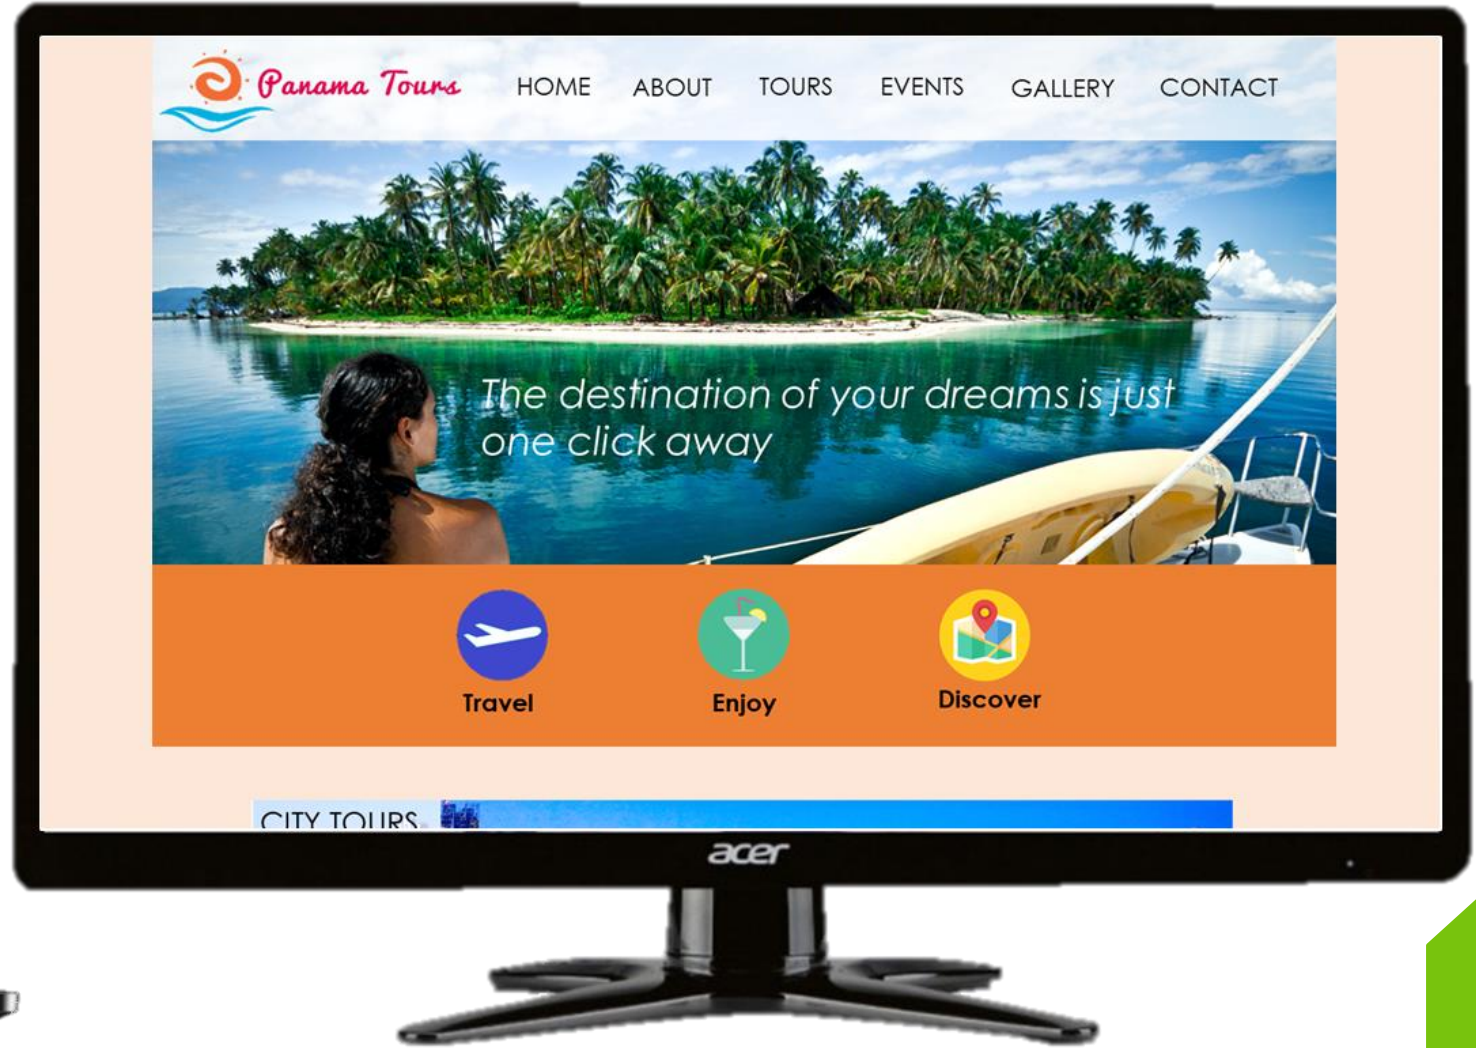

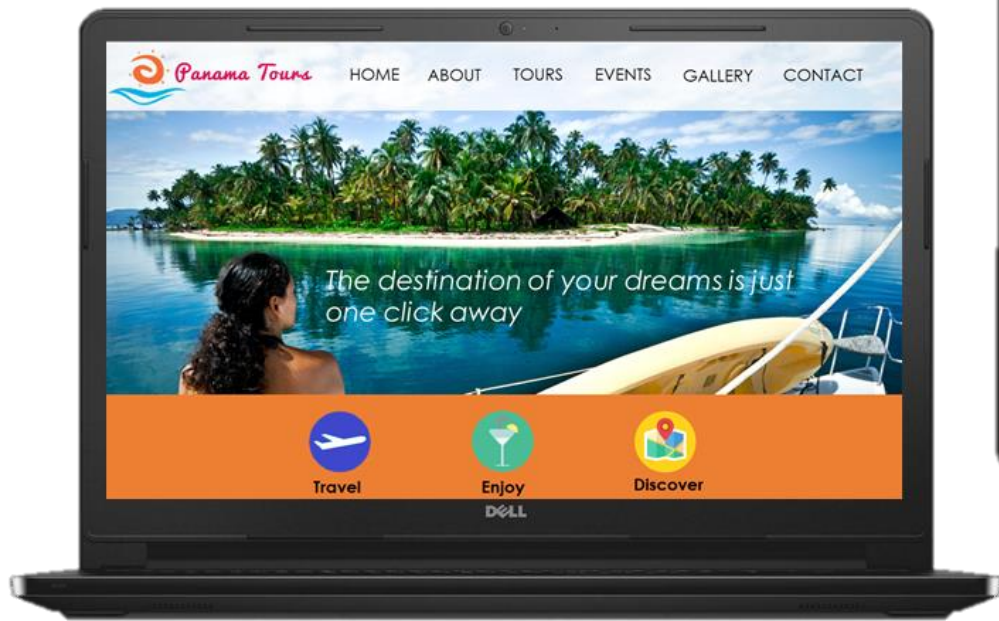

HEIGHT: 1653 px

The large wireframe was previously introduced (week 5).

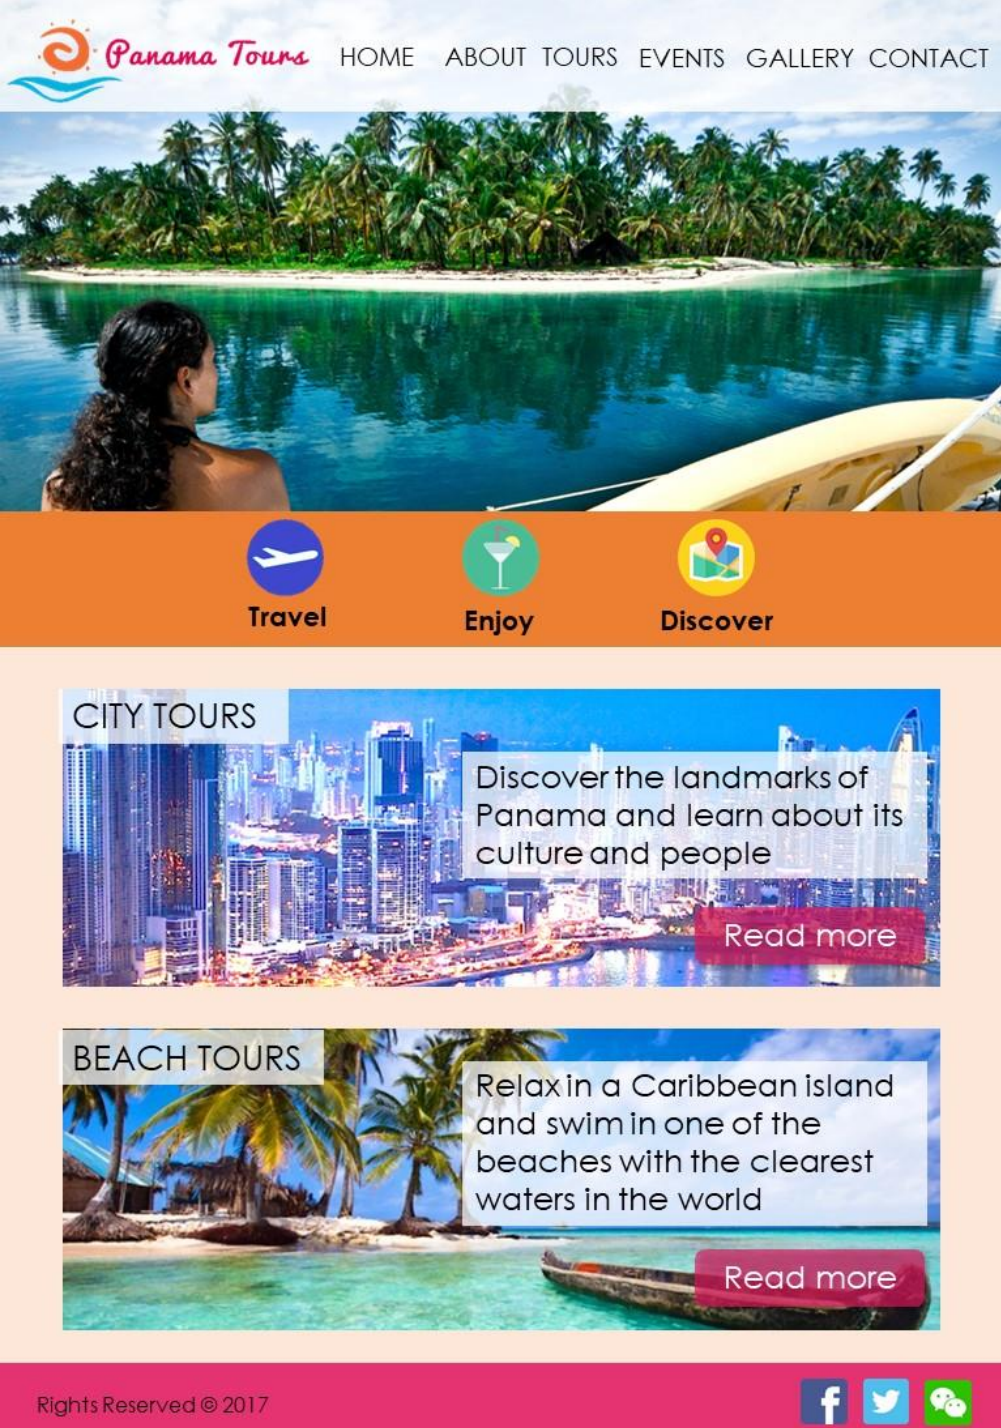

The large wireframe will fit the whole screen if it isn't too big, for example: a 13" laptop; but it might not fit the whole screen if it is big.

MEDIUM SIZE

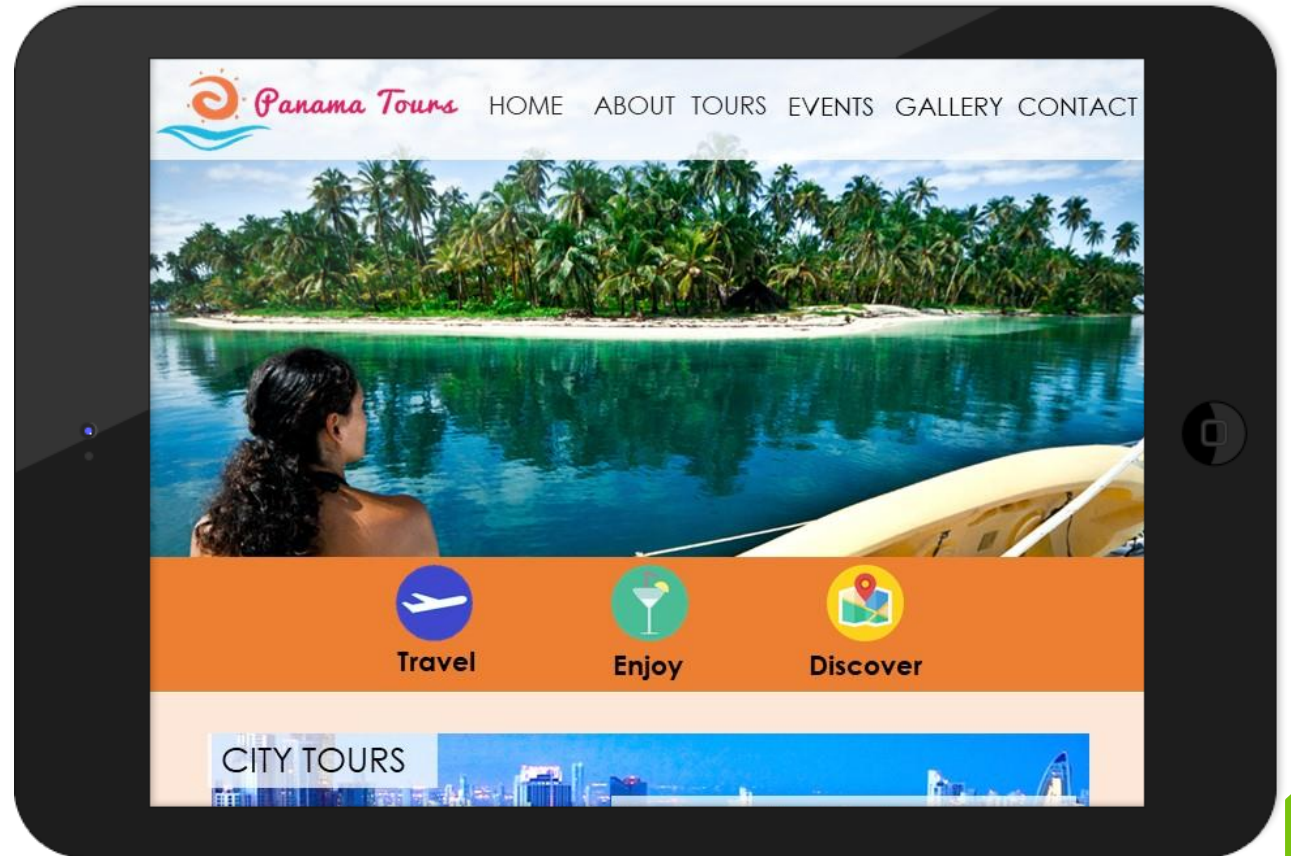

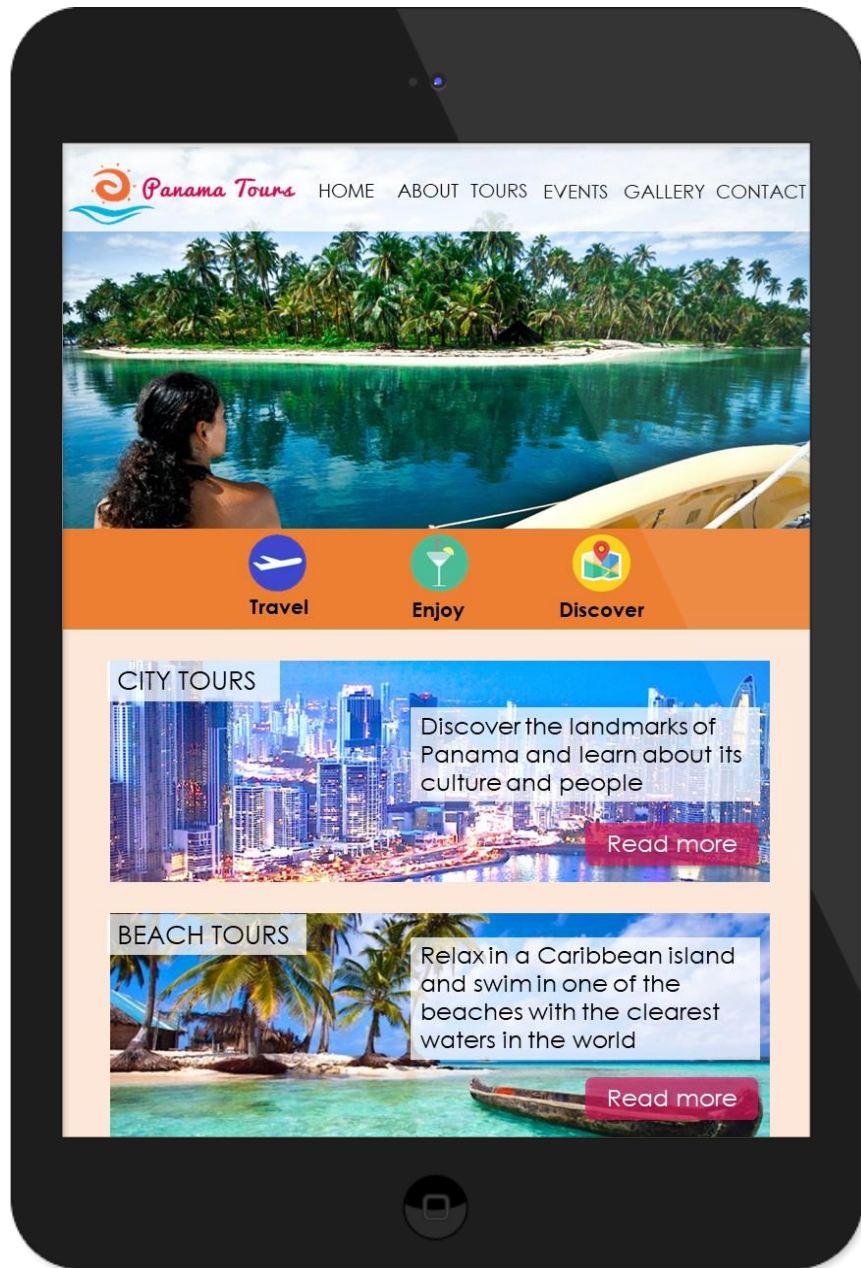

WIDTH: 768 px

HEIGHT: 1200 px

The medium wireframe is for tablets. It has the same design as the large wireframe, but its content size has been reduced, except for the text that has a larger font, so the visitor can clearly read the information.

The medium wireframe has been designed to fit the whole tablet screen.

SMALL SIZE

WIDTH: 320 px

HEIGHT: 980 px

The small wireframe is for the mobile version of the website. The header that used to have a menu showing the options, now has a “hamburger menu” that won’t show the options unless it is clicked. Also, the logo has been moved to the center in order to make the mobile version more appealing to the visitors.

The images “City tours” and “Beach tours” have their titles all written in uppercase and centered, because if the titles were kept at the same size and at the same position, it wouldn’t be visible for the visitors at all.

The images’ captions and the “Read more” buttons were moved below the images; and the footer icons were centered as well.
